

ONE PIECE ALUMINUM TALL CONE FLASHINGS

This flashing will outlast the life of the building and is re-usable when roofing surface/waterproofing needs to be restored.

Traditional galvanized flashings rust and when re-roofing it is necessary to torch the flashings directly to free them from the tar. When this is done the water tight soldered or siliconed joints are damaged and a new flashing has to be installed. The one piece aluminum version can be heated without any issues since it is a solid one piece construction.

B-Vent codes: BVxxBTFAL1 Pitch Pockets: PPxxAL1

Available 3" - 10" for Don Park B-Vent and 2" and 3" pitch pockets
